Project: Smart Calorie Analyzer

What Am I proud about:

In this phase of our project, we've achieved a significant milestone by creating a location page that accurately detects and showcases the user's current location, providing details such as city, state, latitude, and longitude. This accomplishment was made possible through the integration of the Google Geocode API.

Moving forward, our focus will be on enhancing the user experience by incorporating features that leverage the detected location. In the upcoming project reports, we plan to implement a functionality that identifies nearby fitness centers based on the user's location. This addition aims to facilitate users in finding fitness facilities in their vicinity easily.

Moreover, we're committed to enhancing the overall content of our platform. As part of this effort, we will introduce food-related blogs and articles on the location page. This addition is designed to provide users with valuable information and references related to food, contributing to a more comprehensive and engaging user experience.
